AIME-2025, sample 508

Early exiting position

True: 62 | Pred: 50

... - âĪ Ļ 4 1)/ 6 is not the correct y -coordinate . Therefore

, this suggests that my initial calculation is correct , and the

answer is (- 3 - âĪ Ļ 4 1)/ 6 , which is in the form (a -

âĪ Ļ b)/ c if we allow a to be negative , but the problem

specifies a , b , c are positive integers . This is a contradiction

, indicating a possible error in the problem or my solution . However

, since the problem is from a competition , it 's more likely that

I made a mistake . Let me revisit the quart ic equation . Earlier ,

after substit uting t = x âĪ Ļ 3 , we had the quart ic equation t

^ 4 - 2 t Â³ - 2 5 t Â² + 1 8 t + 1 2 0 =

0 , which fact ored into (t Â² + t - 1 0)(t Â² - 3 t

- 1 2) = 0 . Let me double -check this factor ization . Multiply

(t Â² + t - 1 0)(...
