Early exiting position

True: 4 | Pred: 4

... a ^\{ m \\ cdot n \} $. Applying that here , the right side
becomes : $$ 2 ^ 8 = 2 ^\{ 2 x \} $$ So now both sides have
the same base , which is 2 . If the bases are equal and the
expressions are equal , then their ex ponents must be equal as well
. That means : $$ 8 = 2 x $$ To solve for $ x $, divide
both sides by 2 : $$ x = \\ frac \{ 8 \}\{ 2 \} = 4 $$ Wait
, let me check if that makes sense . If $ x = 4 $, then $ 4
^ 4 $ should equal $ 2 ^ 8 $. Let me compute both : $ 4 ^ 4
= 4 \\ times 4 \\ times 4 \\ times 4 = 1 6 \\ times 1 6 = 2
5 6 $ $ 2 ^ 8 = 2 \\ times 2 \\ times 2 \\ times 2 \\ times
2 \\ times 2 \\ times 2 \\ times 2 = 2 5 6 $ Yes , both equal
2 5 6 . So that checks ...
